

# Fill level UniAirless MEZZO ROUND

## Information on Fill level

In order to avoid leakage of the bulk through the orifice, while snapping the pump onto the container, listed fill levels in the table below should not be exceeded.

When dispensers are extremely underfilled, the resulting air pocket between the bulk and the bottom of the pump might cause a higher number of strokes to prime.

High underfilling or big air pockets, embedded inside the bulk, can result in leakage problems during air freight. In order to avoid air pockets, we recommend using diving fill nozzles.

Following piston positions are available:

Model / Fill level	Standard fill level (Piston position at 1mm)
Mezzo 30ml	35,5ml
Mezzo 50ml	56,5ml
Mezzo 75ml	83,0ml
Mezzo 100ml	102,5ml

(based on density 1,0 g/ml)

The residual amount in the system is approx. 1,5ml.
